

# THE BEST MULTIROOM WIFI STREAMING SPEAKER IS

## BLUESOUND PULSE

To be honest, all the speakers reviewed were of top quality, each having their own plus points like ease of use and network connectivity, but ultimately when going with speakers you have to go with the one that sounds best, and that's the BlueSound Pulse. Chalk it down to that 35-bit /844 kHz DAC and perhaps the allowances made for extra processing that let the Pulse to play high resolution audio tracks. To our ears, the Pulse simply has the most refined sound of the group. There is a great naturalness produced by this speaker that lends well to lush soundscapes, and the dynamics of the drivers used allow the speaker to bring both rhythm and pace to performances, which makes for extremely enjoyable listening sessions. It may not be the cheapest, nor does it have the nicest interface, but in terms of audio it certainly brings the sweetest sound.

## LENCO PLAYLINK 6

We've said before that the PlayLink 6 was the one speaker in this group we were truly impressed by, and that's simply because the price to performance ratio is quite stunning compared to the other units in this group. It may not be the best looking speaker out there, but it's very easily the most functional, as there's a dedicated switch for almost every mode of pairing you can think of. Of course, that wouldn't be worth much if the sound wasn't worth listening to, and the PlayLink 6 excels there too, easily handling most of the commonly used file formats up to 24bit/192kHz resolution. From our testing, we'd say the PlayLink 6 was easily the second best sounding speaker, so when you factor that in against price, it's hard to argue against it.
